Urgent® PC
OUTPATIENT TREATMENT FOR OVERACTIVE BLADDER SYMPTOMS
The tibial nerve is easily accessed in the lower leg. Stimulation travels from the point of entry near the ankle, up the tibial nerve and to the sacral plexus.

PATIENT PREFERRED: REFRACTORY TREATMENT FOR ASSOCIATED SYMPTOMS OF OAB

- First choice among next line therapies for patients who are refractory to conservative and drug therapies
- 98% of patients were willing to try PTNS

URGENT PC CANDIDATES INCLUDE THOSE:
- Too old and/or frail for other therapies
- Suffering intolerable side-effects from other therapies
- Experiencing insufficient response to drugs
- Already receiving BOTOX® injections
- Unwilling to perform self-catheterization
- Needing future MRIs
- Who want a non-drug, non-surgical option

URGENT PC IS LOW-RISK WITH FEW CONTRAINDICATIONS AND NO SEVERE ADVERSE EVENTS. URGENT PC IS A GOOD OPTION FOR MOST PATIENTS SUFFERING FROM URINARY URGENCY, URINARY FREQUENCY, AND URGE INCONTINENCE.

- Outpatient neuromodulation
- Effective in both men and women, regardless of age
- Low-risk with few contraindications and no severe adverse events
- May be combined with behavioral and drug therapies

URGENT® PC NEUROMODULATION SYSTEM

Since 2003, Urgent PC has set the standard for Percutaneous Tibial Nerve Stimulation (PTNS) performance, both in clinical studies and in clinical practice.

PROVEN OPTION: FOR MOST PATIENTS WITH ASSOCIATED SYMPTOMS OF OVERACTIVE BLADDER (OAB)
A robust data set demonstrates that PTNS with Urgent PC is effective with consistent results in 3 randomised controlled trials (RCTs), 3 durability studies, 2 meta-analyses and over 50 peer-reviewed articles.

Statistically superior to sham in reducing frequency, incontinence episodes, nighttime voids and urgency. Superior subjective response to leading drugs with statistically significant reductions in OAB symptoms.

At 3 years follow-up, all quality of life (QoL) parameters remained markedly improved with about 1 treatment a month (all p<0.0001).
THE PROVEN PTNS DEVICE

URGENT® PC NEUROMODULATION SYSTEM

- Option for most patients experiencing associated symptoms of OAB such as urinary urgency, urinary frequency, and urge incontinence
- Up to 80% patient response in men and women
- More than a million treatments since 2003
- Easy to integrate into clinical practice

CONTRAINDICATIONS: Treatment with Urgent PC is contraindicated for patients with pacemakers or implantable defibrillators, patients prone to excessive bleeding, patients with nerve damage that could impact either percutaneous tibial nerve or pelvic floor function, or patients who are pregnant or planning to become pregnant during the duration of the treatment.

PRECAUTION: Exercise caution for patients with heart problems related to pacing. Most patients do not experience side-effects. If side-effects occur, they are typically temporary and include mild pain and skin inflammation at or near the stimulation site.
