traxi quickly and easily retracts the panniculus for any abdominal procedure, freeing staff to care for the patient:

Predictable. Reliable. Retraction.<sup>TM</sup>

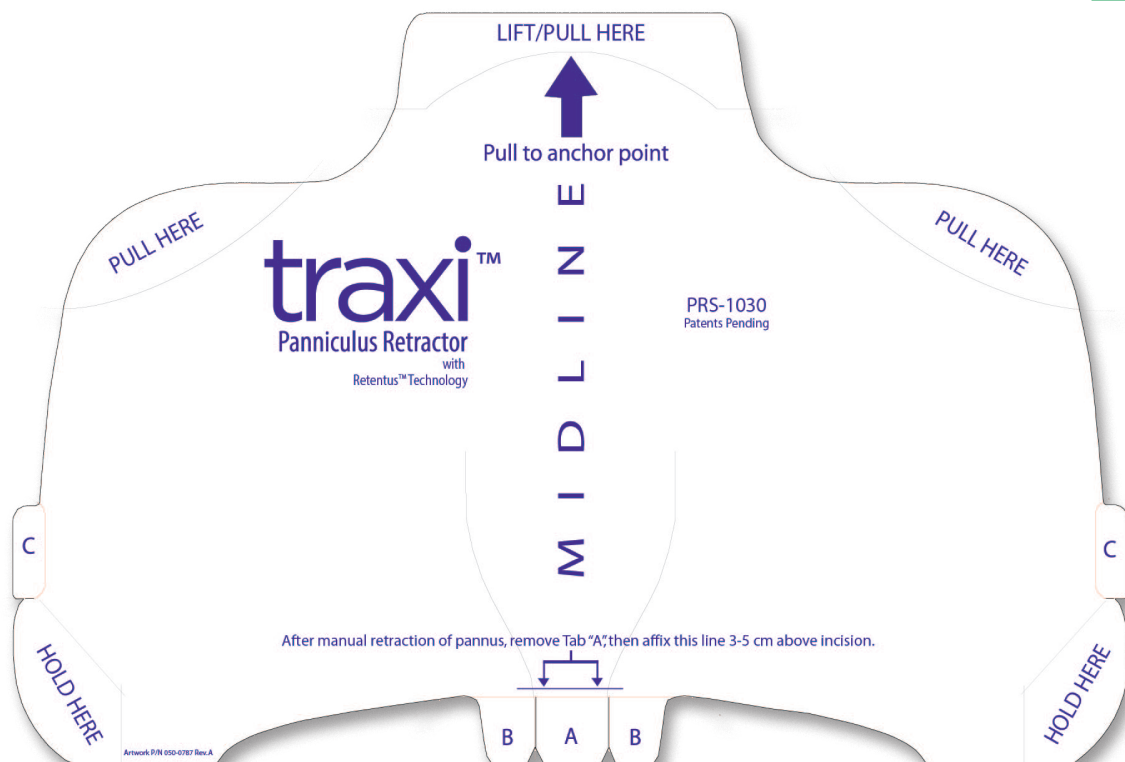

Have confidence in a repeatable process

Leave traxi in place for up to 24 hours post-op

Care for patients with more compassion & dignity

# traxi panniculus retractor

## Consideration for patient dignity

Whether used during a C-section or any other abdominal procedure, traxi is less involved than tape or straps. With reduced prep time and clinician involvement, your high BMI patients will think this is a normal part of any procedure. Application and removal are both quick and easy.

The traxi Panniculus Retractor is as perfect a solution to the pannus problem as I have ever tried. This product is a winner . . . a big-time winner.\*

## Patient Benefits

- Freedom of Movement
- Ability to Wear Postoperatively

## Potential Patient Benefits

- Increased Satisfaction
- Increased Comfort
- Increased Dignity

## Clinician Benefits

- Improved Incision Site Visualisation
- Eliminate Surgical Tape & Towel Clamps
- Eliminate Manual Holding

## Potential Clinician Benefits

- Decreased Time in Surgery
- Decreased Risk of Staff Injury
- Easily Assess Incision Site Postoperatively
